

Matt Morrison

Front End Developer

✉ mattlmorrison1@gmail.com
☎ +447852387150
📍 Camberwell | London

PROFILE

Ambitious developer with 4+ years of experience delivering responsive web applications. As the sole front-end specialist in my current team, I lead on front-end design and architectural decisions for reactive data-processing applications. Expert in Angular, with skills and best practices readily transferrable to other modern front-end frameworks.

SKILLS

Frontend: Angular (10–20), React, TypeScript, JavaScript, RxJS, NgRx, NGXS, Ionic, HTML, CSS

Backend: .NET, C#, Node.js, RESTful APIs, WebSockets, Socket.io

Cloud & Infrastructure: Azure, AWS, Docker, Kubernetes, Azure DevOps, GitLab

Testing & Quality: Jest, Cypress, Storybook, SonarCloud

Data & Tools: SQL, Git, Postman

EMPLOYMENT HISTORY

Infor, Software Engineer

September 2023 - Present

- Led front-end architecture discussions and technical reviews, shaping the technical scope and design decisions for new features and platform initiatives.
- Consolidated two front end repositories and redesigned navigation to align with the wider product ecosystem, improving page load performance and simplifying CI/CD workflows.
- Delivered two greenfield projects, an event-driven Node.js service to accelerate data entry, and an admin interface to manage core app settings, reducing manual work and improving reliability.
- Collaborated with designers to create reusable design system components.
- Delivered end-to-end full-stack features, building API endpoints, designing new database tables, and integrating AWS services including S3 and SQS.
- Migrated application portfolio, from Angular 11 to 17. Refactoring to leverage the latest features of Angular to improve code quality and performance.
- Created build configurations and managed complex git branching scenarios to facilitate cloud migration from Azure to AWS.
- Implemented testing strategies using Jest, Storybook and Cypress, working with the QA team to ensure code quality and consistency.
- Collaborated in code reviews, paired programming and build pipeline maintenance.

Sportplan, Front End Developer

August 2022 - September 2023

- Developed features and optimised UI/UX on Teamo, a desktop and mobile application with 300,000+ users, using Angular and Ionic.
- Partnered with designers to translate Figma designs into responsive, cross platform components, establishing reusable patterns that improved scalability and consistency across devices.
- Integrated third-party APIs to enhance match and season statistics for 200+ sports clubs, strengthening the accuracy, reliability, and scalability of statistical reporting.
- Implemented scalable state management, leveraging Angular services and RxJs.
- Collaborated with backend developers to define technical scope and deliver new features.
- Leveraged WebSockets to send requests to the server and manage real-time responses.

Sportplan, Product Manager

September 2019 - June 2022

- Led a team, managing the admin, marketing and development of Sportplan, a web and mobile application with 200,000+ users.

- Led design decision meetings to improve usability and optimise user engagement on core application pages, optimising critical user journeys and feature adoption.
- Designed and optimised responsive email campaigns supporting onboarding journeys and lifecycle engagement, contributing to improved paid subscription conversion.

RELEVANT EXPERIENCE

The Jump Digital School, Javascript Developer Bootcamp

January 2022 - May 2022

- Applied HTML, CSS, and JavaScript to build responsive, interactive user interfaces.
- Developed React applications using hooks, props, and Redux, enabling scalable state management and maintainable code across multiple projects.
- Implemented testing with Cypress and Jest to ensure code reliability, maintainability, and predictable functionality.

Personal Project, Teamsheet

April 2020 - September 2021

- Created a cross platform football quiz application, building modular, reusable components in Angular to support dynamic gameplay and scalable functionality.
- Deployed the app across web, iOS, and Android, integrating Google Analytics to monitor user performance and engagement, driving insight led improvements.
- Built a server side app with Node.js and Socket.io to support real-time multiplayer mode.

EDUCATION

University of Leeds, Sport & Exercise Science

September 2011 - June 2014

- 2.1 BSc (Hons) | Dissertation in biomechanics

Whitgift School

September 2005 - July 2011

- 3 A-Levels (AAB) and 11 GCSEs (including 7 A*/A)
