PROFILE

Ambitious developer with 4+ years of experience delivering responsive web applications primarily in Angular. As the sole front end specialist in my current team, I lead on front end design and architectural decisions that shape the future of reactive data processing applications.

EMPLOYMENT HISTORY

Infor, Software Engineer

September 2023 - Present

- Led front end development across 3 applications, owning feature delivery from technical refinement through to production release.
- Refactored navigation and merged 2 repositories to create a tab interface, improving page load times and simplifying the build and deployment process.
- Developed 2 greenfield projects: an event-driven Node.js application to accelerate data entry, and an Angular front end with a .NET backend for managing application configuration.
- Collaborated with UX designers to create reusable design system components.
- Delivered end-to-end full-stack features, building API endpoints, designing new database tables, and integrating AWS services including S3 and SQS.
- Created build configurations and managed complex git branching scenarios to facilitate cloud migration from Azure to AWS.
- Led technical share backs and architecture decision meetings with other developers.
- Implemented testing strategies using Jest, Storybook and Cypress, working with the QA team to ensure code quality and consistency.
- Collaborated in code reviews, paired programming and build pipeline maintenance.

Stack: Angular 11-20 .NET C# Azure AWS Node.js Docker Kubernetes SQL

Sportplan, Front End Developer

August 2022 - September 2023

- Developed features and optimised UI/UX on Teamo, a desktop and mobile application with 300,000+ users, using Angular and Ionic.
- Collaborated with UX designers to convert Figma designs into robust, responsive code with consistent cross browser and platform functionality.
- Integrated third party APIs to report on data for 200+ sports clubs.
- Implemented scalable state management, leveraging Angular services and RxJs.
- Partnered with the backend developers to design and deliver new features.
- Leveraged WebSockets to send requests to the server and manage real-time responses.

Stack: Angular 11-14 Ionic

Sportplan, Product Manager

September 2019 - June 2022

- Led a team, managing the admin, marketing and development of Sportplan, a web and mobile application with 200,000+ users.
- Led design decision meetings with a focus on improving usability and increasing user engagement across key application pages.
- Designed, built, and tested responsive marketing emails using HTML and CSS.

RELEVANT EXPERIENCE

The Jump Digital School, Javascript Developer Bootcamp

January 2022 - May 2022

- Strengthened foundational knowledge of HTML, CSS, and JavaScript.
- Built multiple React applications, utilising hooks, props, and Redux for state management.

- Developed an understanding of JavaScript testing practices using Cypress and Jest.

Stack: HTML CSS Javascript React

Personal Project, Teamsheet

April 2020 - September 2021

- Created a football quiz application using Angular and Ionic, leveraging core Angular features such as components, services, and routing to deliver dynamic, responsive functionality.
- Gained hands-on experience with web hosting, Xcode deployment, and Google Analytics integration for performance tracking and user insights.
- Built a server side app with Node.js and Socket.io to support real-time multiplayer mode.

Stack: Angular Ionic Socket.io Node.js

EDUCATION

University of Leeds, Sport & Exercise Science

September 2011 - June 2014

- 2.1 BSc (Hons) | Dissertation in biomechanics

Whitgift School

September 2005 - July 2011

- 3 A-Levels (AAB) and 11 GCSEs (including 7 A*/A)
